

Build and evaluate **two AI personal assistants**.

1. Open Source Assistant

Build a simple personal assistant using an open-source model from Hugging Face.

Examples:

- Qwen 2.5
- Llama 3.2
- Phi-3
- Mistral
- any equivalent OSS model

2. Frontier Model Assistant

Build the same assistant experience with the same capabilities using any hosted foundation model/API.

Examples:

- Claude Sonnet
- GPT-4.1
- Gemini
- DeepSeek
- Grok
- any equivalent

The assistant should support:

- multi-turn conversations
- short-term conversational memory/context
- basic assistant-like behavior

You may use any lightweight interface:

- Streamlit
- Gradio
- FastAPI
- Telegram/Discord bot
- CLI
- web app
- any equivalent setup

Evaluation

Compare both assistants on:

1. Hallucination Rate
2. Bias & Harmful Outputs (stereotypes, discriminatory behavior, unsafe responses)
3. Content Safety (jailbreak resistance, refusal handling, robustness to harmful prompts)

You may use:

- public benchmarks
- custom prompts
- LLM-as-judge approaches
- your own evaluation framework

We recommend testing with at least:

- factual prompts
 - adversarial/jailbreak prompts
 - sensitive/bias-related prompts
-

Deliverables

1. GitHub Repository

Complete source code.

2. README

Include:

- setup instructions
- architecture decisions
- tradeoffs made
- what you would improve with more time

3. Short Evaluation Report (1 page)

Include:

- comparison results as infographics
- recommendations

4. Demo (Optional)

Hosted link, screenshots, or Loom video.

Bonus

You will be given a guaranteed interview if you are able to complete the following task.

- **Deploy the OSS model publicly**
- **Cost + latency table for the OSS deployment**
- add observability/evals
- add guardrails/safety layers
- implement memory/tool use

OSS model can be deployed on any of the following platforms:

- Hugging Face Spaces (Qwen2.5-0.5B-Instruct recommended)
- Modal
- Ollama
- RunPod
- Replicate
- any equivalent stack

Submission

Please send:

- GitHub repo
- evaluation pdf
- demo link (optional)

to: **work@ollive.ai**

Looking forward to seeing what you build 🚀
